New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases.

WPI; 2003-103456/09

Claim 64; Fig 2; 116pp; English.

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (TIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (RepsilonR). Also provided are nuclectide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for

The invention relates to a modified FC rusion procesn where a least one amino acid residue from the heavy chain constant region selected from residues 250, 314, and 428 (Rabat numbering) is different from that residues 250, 314, and 428 (Rabat numbering) is different from that present in the unmodified Fc-fusion protein. Also included are an FC fusion protein comprising an Fc region substantially identical to that of the corresponding unmodified Fc-fusion protein, a modified for that that of the corresponding unmodified Fc-fusion protein, a modified CC id class antibody fragment (comprising a heavy chain constant region or Fc-region where at least one amino acid residue selected from that present in the unmodified IgG class antibody, an isolated polynucleotide consisting of residues 250, 314, an isolated polynucleotide consisting of residues antibody, an isolated polynucleotide comprising an amino acid sequence at least 90% identical to a sequence selected from ADZ69600-ADZ69656, an isolated polynucleotide comprising an amino acid residue as cited above, and solated polynucleotide comprising an amino acid residue as cited above, and substituting the selected residue (s) with an amino acid different from the resent in the Fc-fusion protein) and a method of producing a substituting the selected residue (s) with an amino acid different from comprising preparing an expression vector comprising a suitable for FCRN/altered serum half-life as compared with the unmodified Fc-fusion protein with an allow of the compared host cells to produce the modified in the Fc-fusion protein are least of the following protein (comprising preparing an expression vector comprising protein (compared host cells to produce the modified IgG Fc fusion from a tyle 8.0. The fusion proteins are useful for studying protein function in vitro and in vivo and as a potential therapeutic and disponent residue from that is mutated is covered in the feature relature for any than anino acid substitution at residue 250, 314 or 428 (Kabat rangoments).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180

Isolating a nucleotide which encodes the zcytor 10 cytokine receptor enables the production of recombinant cells expressing the receptor. Those cells can then be used to detect the presence of a medulator of zcytor10 protein by culturing the cells in the presence of a test ligand and comparing levels of activity of mouse zcytor10 in the presence and absence of the test sample. Similarly, detection of zcytor10 receptor ligand within a test sample can be achieved. The method comprising contacting a test sample can be achieved. The method comprising contacting a test sample can be achieved. The method comprising contacting a test sample can be achieved. The method comprising contacting of the zcytor 10 cytokine receptor and detecting the binding of the polypeptide to a ligand in the sample. Specified peptide fragments of the zcytor 10 cytokine receptor and the methods described are used to identify ligands that stimulate the proliferation and/or development of haematopoletic, lymphoid and myeloid cells. Peptide fragments of the cytokine receptor are useful for treating lymphoid, immune, inflammatory, splenic, blood or bone disorders and for generating artibodise directed against the receptor. A vector appressing a secreted human zcytor 10 heterodimer is constructed. In this construct the cytokine binding domain of zcytor 10 is fused to the heavy cytokine receptor and the extracellular portion of the the the heterometric contactor and interior and interi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New cytokine receptor mouse zcytor 10, useful for detecting ligands that stimulate proliferation or development of hematopoietic, lymphoid and myeloid cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cytokine receptor subunit (an interleukin receptor subunit) is fused to human kappa light chain (See GENESEQ record AAAS4474). The two sequences are fused together using two primers (AAA54475, AAA54476)
                                                                                                                                                                                                                                                                   zcytor 10 cytokine receptor; cytokine; receptor; antibody; ligand;

The invention relates to an immunoadhesin comprising: (a) a chimeric intercellular adhesion molecule (ICAM)-1 comprising a rhinovirus receptor protein linked to at least a portion of an immunoglobulin heavy chain; and (b) optionally a J chain and secretory component associated with the chimeric ICAM-1 molecule. The immunoadhesin has plant-specific glycosylation and virucide activity. The immunoadhesin is useful for reducing infection by human rhinovirus (HRV) and hence the initiation or spread of the common cold by HRV. The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding relass of viral RNA and formation of empty capaids. Expression of the immunoadhesin in plants would be tetrameric, rather than dimeric. Immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J

chain increases the stability of the immunoadhesin in the mucosal environment. Production is significantly less expensive in plants than animal call culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to

The invention relates to a method for treating or preventing a T cell mediated condition or a Th2 cell mediated condition in a mammal. The mediated condition or a Th2 cell mediated condition in a mammal. The composition comprising a death domain containing receptor (DR6) agonist cor antagonist. The method is useful for treating or preventing a T cell mediated condition or a Th2 cell mediated condition in a mammal. A DR6 agonist is useful in the manufacture of a medicament for treating or preventing at least one symptom associated with aberrant apoptosis, graft or preventing at least one symptom associated with aberrant apoptosis, graft versus-host disease, vasculitis, poorlasis, parcreating, insulindependent diabetes mellitus, cancer, multiple sclerosis, Hashimoto's chyroiditis, Graves disease, transplant rejection, systemic lupus crythematosus, autoimmune dermatosus, autoimmune cardiopathy, autoimmune crimatosis, autoimmune dermatosis, autoimmune cardiopathy, autoimmune crimatosis, autoimmune crimatosis, hashimoto's disease, organ rejection after transplantation, thrombotic curaemic syndrome (HUS), aplastic anaemia myelodysplasia, multiple organ dysfunction syndrome (MUS), adult respiratory distress syndrome (ADS), adult respiratory distress syndrome (ADS), contaction syndrome (MUS), adult respiratory distress syndrome (ADS), contaction syndrome (ADS), adult respiratory distress syndrome (ADS), infaction, compilcations of infactions of infaction syndrome (ADS), tulninant viral hepatitis furnome and incompant of syndrome (ADS), contaction of syndrome (ADS), distributed lymphoma, HUV-induced lymphoma, HUV-induced lymphoma, HUV-induced lymphoma, HUV-induced lymphoma, HUV-induced lymphoma, HUV-indu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  associated ulceration, cytoprotection during cancer treatment, teroperation from chemotherapy, recuperation from irradiation therapy, or a condition or symptom related to the above mentioned diseases in a mammal. The present sequence is human DR6 protein-related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
Treating or preventing T cell or Th2 cell mediated condition e.g., asthma or multiple sclerosis in mammal, comprises administering composition comprising death domain containing receptor, DR6 agonist or antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LTKNOVSLTCLVKGFYPSDIAVEWESNGOPENNYKTTPPVLDSVGSFFLYSKLTVDKSRW 300

The present invention describes an isolated human zcytor19 protein (I),
and truncated zcytor19 proteins. (I) has immunosuppressive, cytostatic,
antitheumatic, antiatrhitic, neuroprotective, antiinflammatory,
antidiabetic, nephrotropic, dermatoJogical, anti-HIV and haemostatic
activities, and can be used in vaccines. (I) or an antibody binding (I)
cactivities, and can be used in vaccines. (I) or an antibody binding (I)
cc activities, and can be used in vaccines. (I) or an antibody binding (I)
cc activities, and can be used autoimmune system for reducing rejection of
tissue or organ transplants and grafts and for treating T-cell specific
cleakaemias or lymphomas and autoimmune system for reducing rejection of
cleases and Crohn's disease. The antibodies can also be used for treating
disease, chronic lymphocytic leukaemia, secondary glomerulonephritis or
cyasculitis associated with lupus, polyarteritis, scleroderma, HIV-related
clisease, amyloidosis and haemolytic uraemic syndrome. (I) and the
antibodies can also be used for renal or urological neoplasms and
cliseases, Human zcytor19 is located to chromosome 1, more specifically to
chromosome 1p36.11. The present sequence represents a human Igg gamma 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a cytokine receptor designated zcytor17. Zcytor17 has immunomodulatory, antinflammatory, antiviral, cytostatic, antirtrentic and muscular activities. The zcytor17 proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-mediated immunity and for stimulating or such as in the treatment of infections involving immunosuppression, including certain viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated polynucleotide encoding a cytokine receptor zyctor17 which is useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone disorders.

infections. They are also useful for inducting cytotoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful freating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatitis, and inflammatory bowel disease. Zcytor17 was mapped to chromosome 5, specifically to the Sqll chromosomal region. ABA93767 tc ABA893843 and ABB05730 to ABB05745 represent sequences used in the exemplification of the present invention

The invention relates to a novel fusion protein comprising an IgE Feepsilon fragment and an IgG Fegamma fragment, which binds to an FeepsilonKI and/or FeepsilonKII receptor and an FegammaRIB receptor. The fusion protein of the invention may have a use in protein therapy. The fusion protein is useful in treating or preventing IgE-mediated allergies and asthma, such as allergic asthma, allergic rhinitis, hay fever, food allergy, atopic dermatitis and drug allergy. The allergic response is particularly caused by peanut allergen. The present sequence represents the human IgGI Fegamma fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

Reducing the immunogenicity of a fusion protein by changing an amino acid within the junction region spanning a fusion junction of a fusion protein to reduce the ability of the candidate T-cell epitope to interact with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method of reducing the immunogenicity of a fusion protein. The method involves identifying a candidate T-cell epitope within a junction region spanning a fusion junction of a fusion protein and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell receptor. The method is useful for reducing the immunogenicity of fusion proteins for use in therapy. The present sequence is human immunoglobulin G1 (IgG1) heavy chain Fc region. This sequence is used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           241 LIKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTPPVLDSDGSFFLYSKLTVDKSRW 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               300
                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for reducing the immunogenicity of a fusion protein which involves identifying a candidate T-cell epitope within a junction spanning a fusion junction of a fusion protein, and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell receptor. The method is useful for reducing the immunogenicity of a fusion protein. It is useful for analysing, changing or modifying one or more amino acids in the junction region of a fusion protein to identify a T-cell epitope and immunogenic fusion proteins are useful in providing therapeutic treatment. The present sequence is human immunoglobulin GI [IgG1) heavy chain PC region used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

Treating or preventing a B cell mediated condition e.g., chronic hepatitis or chronic cirrhogis, in a mammal by administering a pharmaceutical composition comprising a DR6 agonist or DR6 antagonist to the mammal.

Disclosure; Page 96-97; 97pp; English.

The present invention describes a method (MI) for treating or preventing composition composition a mammal by administering a pharmaceutical composition composition and a mammal by administering a pharmaceutical composition comprising at least one by a flood described: (I) inhibiting B cell mediated immunity in a mammal. By administering a pharmaceutical composition comprising at least one DRG agonie: (2) use of a DRG agonist in the manufacture of a medicament for treating or preventing at least one space of a medicament for treating or preventing at least one space of a produced architist, serhma, eczema, inflammacory bowel disease, cancer, vasculitie, psoriasis, multiple solerosis, Habinoco's thyroidiis, Graves disease, transplant rejection, systemic lupus erythemacosus, Behcet's disease, transplant rejection, foronic populamune infectility, autoimmune gestriis, autoimmune peptropathy, autoimmune hepatitis, chronic negration after transplants of mornic conditions, autoimmune peptropathy, autoimmune hepatitis, chronic foronic organic conditions, autoimmune dermatosis, fibrosing lung disease, fulminar viral hepatitis, chronic foronic organic cransplants of mornic conditions, and at least one condition or syndrome (MBS), adulated myslodysplasia, multiple organ dysfunction syndrome (MBS), adulated myslodysplasia, multiple organ dysfunction syndrome (MBS), adulated to the conditions in a mammal,; and (3) use of DRG antagonist in the manufacture of a medicament for treating or preventing at least one symptom associated with conditions (C2) such as aberrant apoposis, immunosuptomes, in a mammal,; and infection, complications of infection, willy HIV, HIV, Induced ADS, fulminant viral hepatitis and infection complications of infection, and infection for proprotection during can be part in the manufacture of a med

ô The invention provides human antibodies that bind to stem cell factor (SCF) protein. SCF is also known as mast cell growth factor, steel factor or c-kit ligand. Antibodies of the invention are useful for preparing compositions for treating asthma. They are also used in gene therapy. The present sequence is human SCF antibody heavy chain constant region 180 180 240 241 ITKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTPPVLDSDGSFFLYSKLTVDKSRW 300 9 Human, antibody, stem cell factor; mast cell growth factor; asthma; SCF; steel factor; c-kit ligand; gene therapy; heavy chain.                                          The invention relates to cytokine fusion proteins with increased therapeutic index and methods for increasing the therapeutic index of such fusion protein comprises a non-interleukin-2 (IL-2) moiety fused to a mutant IL-2 moiety. It is useful for preparing a composition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is human immunoglobulin gamma (IgG) constant region. This sequence is used to illustrate the method of the invention

The present invention describes an isolated human antibody (I) that specifically binds osteoprotegerin ligand (OPGL). Also described: (1) a pharmaceutical composition comprising a pharmaceutical carrier and a therapeutic amount of (I); (2) methods of treating an osteopenic disorder in a patient, comprising administering to a patient the pharmaceutical composition of (I) or a pharmaceutical amount of (I); and (3) a method composition of (I) or a pharmaceutical amount of (I); and (3) a method composition of (I) or a pharmaceutical amount of (I); and (3) a method can detecting OPGL, and measuring the level of bound antibody in the sample. (I) has osteopathic, antiarthritic and cytostatic activities, and can be used in treating bone disorders, such as osteoporosis, bone loss from arthritis, pager's disease or osteopenia. The antibody (I) may also be used for detecting OPGL in biological samples and in identifying cells or tissues that produce the protein. The present sequence represent a sequence which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

A;Contents: annotation; Zie, revisions to residues 25, 59, 60, and 264-268
A;Note: the revised sequence differs from that shown in having 60-Ala and in the amidat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A map position: 14932.33-14932.33
C; Complex: An immunoglobulin hererotetramer subunit consists of two identical light (kai hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into l. C; Superfamily: immunoglobulin C region; immunoglobulin homology
C; Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin
F; 20-85/Domain: immunoglobulin homology < LML>
